

FROM THE WORKSHOP

Workshop Roadshow

The popular IoT podcast is stepping outside the nerd lair to become a live workshop!

This live workshop covers:

- Cellular for the IoT
- Hardware design considerations
- Hands-on rapid proof of concept development

Attendees, bring a laptop and NimbeLink will bring the M1 Development Kits and Skywire modems!

Register Here

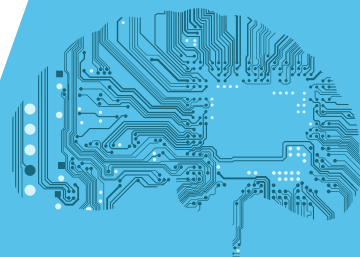

- \$25 / person

Born out of the NimbeLink educational podcast, the “From the Workshop” series has drawn a dedicated viewership serious about IoT Development.

This unique workshop is designed for engineers interested in a practical Introduction to Cellular IoT Design and is for enterprise design engineers at all levels.

Cellular Device Connectivity can be a challenging endeavor and this class aims to simplify the process through an introduction to NimbeLink’s easy-to-connect hardware with expert guidance. Through a unique combination of lecture and hands-on experiments, class participants will understand various elements of cellular, hardware, command sets, componentry and design decision making. By participating in this class, design engineers will be able to accelerate time-to-market design and deployment.
